Professional Summary

Backend-focused Full-Stack Engineer who ships production products end-to-end — from REST APIs, relational schemas, and authentication to payments, CI/CD, and cloud deployment. Built and launched a live subscription SaaS (Stripe billing + webhooks), alongside automation systems and AI-powered media pipelines. Strong emphasis on reliability, clean architecture, and shipping real, maintainable software.

Projects

InvoiceFlow – Full-Stack Invoicing SaaS (live)  *Node.js, Express, SQLite, Stripe, JWT, Resend, Render*

- Built and shipped a live subscription SaaS (custom domain + HTTPS) for invoicing, client management, and revenue tracking
- Integrated Stripe Checkout + webhooks for recurring billing, with signature verification and cancel-at-period-end logic
- Implemented JWT + bcrypt auth (httpOnly cookies), email verification, and password reset via Resend on a DKIM/SPF/DMARC-verified domain
- Designed a multi-tenant relational schema with per-user data isolation and idempotent migrations
- Set up CI/CD on Render (auto-deploy from GitHub) with a 32-test integration suite and health checks

FormForge – Full-Stack Form Builder  *React, Node.js, Express, MySQL, Sequelize*

- Designed normalized relational schema for templates, forms, tags, and likes
- Implemented ranking logic avoiding JOIN + LIMIT aggregation pitfalls
- Built JWT authentication + role-based RBAC system
- Deployed frontend on Vercel and backend on Railway

Transcripto – AI Media Processing Pipeline  *Python, Flask, faster-whisper, PyAnnote, ReportLab*

- Implemented local Whisper inference pipeline for audio/video transcription
- Built async job system to handle long-running media tasks
- Integrated speaker diarization (embedding + clustering pipeline)
- Generated structured PDF reports programmatically
- Deployed full-stack application on Railway
- Designed system for real-world media processing workloads

USPS Live Route Alert Bot (Automation System)  *Python, Telethon, SQLite, Docker, VPS*

- Designed and implemented real-time route monitoring system deployed on VPS for dispatcher use
- Implemented user-defined filtering logic for route matching
- Containerized application with Docker for isolated deployment
- Designed private access control and persistent storage

Skills

Backend Python (async, scheduling), Node.js / Express, REST API design, JWT/bcrypt auth, Stripe (Checkout, subscriptions, webhooks)	Infrastructure Docker, VPS (Hetzner), systemd, Railway, Vercel, Render, CI/CD
Databases PostgreSQL, MySQL, SQLite, SQLAlchemy, Sequelize	AI / Processing faster-whisper, PyAnnote, Async job systems
Frontend React, Tailwind, Bootstrap	Testing Integration testing (node:test)
